Program Overview: Artificial Intelligence also known as Machine Intelligence refers to intelligence displayed by machines, which is contradictory to intelligence displayed by humans known as natural intelligence. AI research which is a component of computer science has been defined as the study of any electronic device which assesses its environment and takes actions that maximize its chances of achieving its designated goals. Generally, the term "Artificial Intelligence" is used when a machine intimates "cognitive" functions that humans relate to other human minds, for eg. "learning" and "problem-solving".

The range of AI is often disputed as machines increasingly become capable because tasks which have been established to need "Intelligence" are often removed due to an effect which is known as "AI effect". For instance, optical character recognition is generally excluded in Artificial Intelligence as it has become an ordinary technology. There is a high career scope in Artificial Intelligence as it is an ever-changing technology. Nowadays, almost all industries are dependent on Artificial Intelligence, thus there is always a high demand for Software Analysis, Computer scientists, Research Scientists etc.

Target Audience: Faculty members and PhD research scholars of AICTE affiliated educational institutions are eligible to participate. There is no registration fees for the course and maximum 50 participants will be allowed to register. Participants will be provided only tea/ working lunch during the course. No TA/DA will be given to any participants and they have to make their own arrangements for stay.
